WORK EXPERIENCE

Digital Operations & Data Engineer

Kafeterija

Jul 2026 – Present

Belgrade, Serbia

- Built AI systems from scratch for sales and performance tracking across digital channels (Wolt, Glovo, in-house app) and Google reviews for a chain of 80+ locations – from data collection and processing to AI automation.
- Developed a full-stack platform (FastAPI + Next.js, Google Cloud) that syncs 47,000+ Google reviews and generates AI reply suggestions via the Claude API, with direct reply publishing to Google – recenzije.info.
- Designed a unified reporting system (Power BI, Excel) that consolidates Wolt and Glovo platform data through a three-layer DIM/RAW/IZV architecture, and a performance dashboard for digital channels with ad-spend tracking and BCG-matrix menu analysis.
- Coordination with Wolt/Glovo platforms and external integrators; tracking the growth of Kafeterija's own delivery app, launched as a lower-cost, commission-free alternative to third-party platforms.

Production Planner in Logistics

BOSCH

January 2026 – June 2026

Šimanovci, Serbia

- Planned and procured production materials against quantities, deadlines, and inventory levels; tracked order transfers and deliveries in SAP, Excel, and an internal planning tool.
- Built a standalone production-planning application (Python/PyQt5) covering 800+ SKUs across a 52-week horizon, plus a VBA Excel capacity-allocation tool and Power Query automation for Power BI reporting.
- Monitored supplier delivery performance and produced delay reports; created and maintained material master data in the system (SAP).
- Controlled production and tracked progress against customer demand, deadlines, material availability, and inventory.

Input-Output Center, Production Department

UNIQA Insurance

May 2025 – June 2025

Belgrade, Serbia

- Worked with data in Excel and internal databases (SQL); entered, processed, and verified documentation within production processes.
- Collaborated with other departments to ensure efficient information flow.

Student Mentor

Faculty of Organisational Sciences

October 2024 – March 2025

Belgrade, Serbia

- Supported students in their academic and professional development and in overcoming challenges during their studies.
- Developed skills in mentoring, active listening, and interpersonal communication.

Administrative Support in Accounting

ProCredit Bank

December 2024 – March 2025

Belgrade, Serbia

- Worked with Open Item Statements (OIS) and provided administrative support in accounting; updated and verified data in line with internal procedures.
- Communicated with relevant departments to resolve discrepancies and reconcile data.

Production Support

Del Trade

October 2021 – February 2022

Čačak, Serbia

- Performed tasks including assembly, quality control, and inventory management; improved time-management and attention-to-detail skills.

PROJECT EXPERIENCE

Fly Brain Bottlenecks (ongoing)

2026

Python, OR-Tools/igraph, LIF simulation (Brian2/numba)

- Max-flow/min-cut analysis of the male *Drosophila* CNS connectome (174,386 neurons, 25.8M synaptic edges; male-cns:v1.0 dataset, Janelia FlyEM/Google) – identifying structural bottleneck neurons between sensory pathways and motor outputs.
- Validated with a whole-brain spiking (LIF) simulation and in-silico ablation: silencing the 34-neuron min-cut set drops the target motor neuron's firing rate to 0.4% of control, while an equal number of random on-path neurons changes nothing.
- github.com/danilo-lazovic/fly-bottlenecks – visualization and write-up in progress.

Automated Production Planning System

2025

MATLAB, Excel

- Developed an intelligent production-planning optimization system based on demand forecasts and capacity, with automated schedule generation that minimizes backlog and optimizes inventory.
- Built a dashboard with 9 analytical charts (capacity utilization, backlog, inventory, top products) and an Excel integration for dynamic data input.
- github.com/danilo-lazovic/production-planning

TSP Heuristic Optimization

2025

Python, MATLAB

- Implemented and compared 4 heuristic algorithms (Nearest Neighbor, 2-OPT, Simulated Annealing, Genetic Algorithm) across 17 European cities, with automated coordinate collection (GeoPy) and route visualization in MATLAB.
- github.com/danilo-lazovic/tsp-optimization

Belgrade Engineering Days – Case Study, 1st Place

April 2025

BEST Belgrade

- Worked in a team on a sustainable solution for the decentralization of Belgrade, optimizing construction costs for residential buildings in suburban municipalities; the solution was recognized as most effective and awarded first place by an expert jury.

SKILLS

Programming & Data: Python, SQL, MATLAB, VBA

Web & Systems: FastAPI, Next.js, Google Cloud/OAuth, API integration (Claude API)

BI & Reporting: Power BI, Excel (Power Query, SUMIFS, Tables), SAP

Operations Research: Pyomo, AMPL/HiGHS, heuristic and metaheuristic methods, DEA

Languages: Serbian (native), English (fluent)

EDUCATION

Management and Organisation – Operations Management

Faculty of Organisational Sciences

Belgrade, Serbia

Gimnazija u Čačku (Grammar School)

Čačak, Serbia
